

Project Design Phase

Problem – Solution Fit

Date	04 October 2026
Team ID	SWTID-2026-5741
Team Members	N. Logeswari, S. Christiena
Project Name	Import Data using Transform Maps (Spreadsheet)
Maximum Marks	2 Marks

Problem – Solution Fit:

Problem – Solution Fit | Team ID: SWTID-2026-5741 | N. Logeswari, S. Christiena

Define CS, fit into CC	1. CUSTOMER SEGMENT(S) CS ServiceNow administrators and HR data owners who need to bring employee lists from spreadsheets into the platform.	6. CUSTOMER CONSTRAINTS CC Little time, uneven spreadsheet quality, the need to avoid duplicate records, access limited to import roles, and a developer instance that may go to sleep.	5. AVAILABLE SOLUTIONS AS Typing records by hand, or one-off list imports and scripts. Fine for a handful of rows, but there is no consistent mapping, duplicates appear and the audit trail is weak.	Explore AS, differentiate
	2. JOBS-TO-BE-DONE / PROBLEMS J&P Load employee records in bulk, correctly and without repeats.	9. PROBLEM ROOT CAUSE RC Columns are not tied to table fields, no unique key is checked, and rows are not reviewed before they reach the target table.	7. BEHAVIOUR BE Admins tidy the sheet in Excel, then retype the data or import it and fix the errors afterwards.	
Identify strong TR & EM	3. TRIGGERS TR A new hiring batch or a migration deadline; a manager needs the data in ServiceNow.	10. YOUR SOLUTION SL Stage the spreadsheet in an Import Set table, map it with a Transform Map, coalesce on Employee ID, then verify the results in the transform history and list view.	8. CHANNELS of BEHAVIOUR CH 8.1 ONLINE ServiceNow modules (Load Data, Transform Maps, Transform History), documentation and community forums.	Extract online & offline CH
	4. EMOTIONS: BEFORE / AFTER EM Before: rushed and unsure about accuracy. After: confident, with a repeatable process.		8.2 OFFLINE CH Team talks, HR sharing the sheet by email or shared drive, and review meetings.
