

Project Design Phase-II

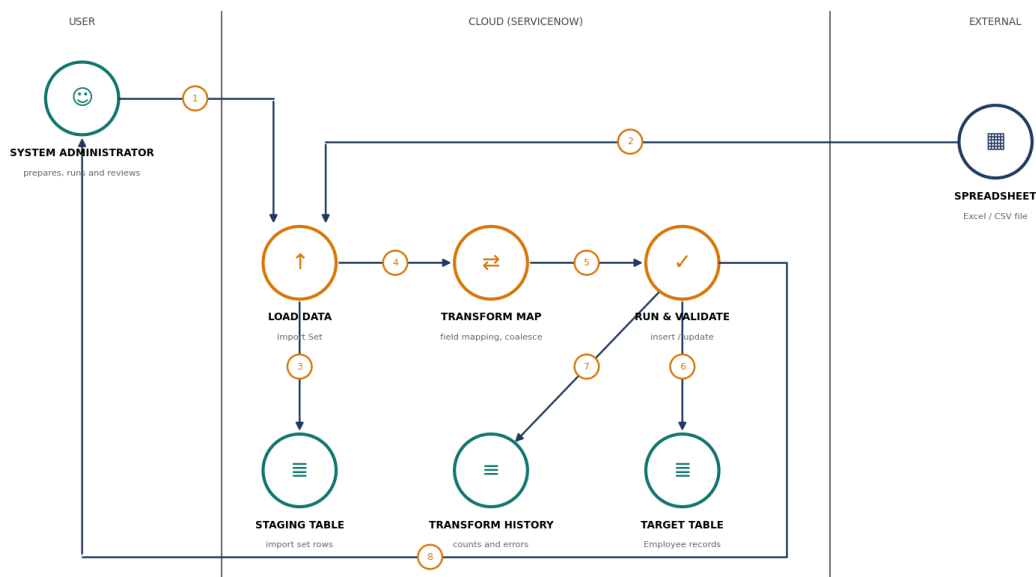

Data Flow Diagram & User Stories

Date	04 October 2026
Team ID	SWTID-2026-5741
Team Members	N. Logeswari, S. Christiena
Project Name	Import Data using Transform Maps (Spreadsheet)
Maximum Marks	4 Marks

Data Flow Diagrams:

Flow

Data flow diagram: import spreadsheet data into ServiceNow using Transform Maps | Team ID: SWTID-2026-5741 | N. Logeswari, S. Christiena

1. The administrator chooses the spreadsheet (.xlsx or .csv) to import.
2. The file is supplied to the Load Data step.
3. Each row is written to the staging (Import Set) table.
4. Staged rows pass to the Transform Map, which maps fields and coalesces on Employee ID.
5. Mapped rows move to the run-and-validate step.
6. Valid rows are inserted or updated in the target table.
7. Counts of inserted, updated, ignored and failed rows are written to the transform history.
8. The administrator reviews the results and adjusts the map if required.

User Stories:

User Type	Functional Requirement (Epic)	User Story Number	User Story / Task	Acceptance Criteria	Priority	Release
System Administrator	Data Preparation	USN-1	As an administrator, I can prepare the employee spreadsheet with all required columns	Sheet has headers for Employee ID, Name, Email, Department and Location	High	Sprint-1
		USN-2	As an administrator, I can check the sheet for empty cells, repeated IDs and bad email formats	No empty required cells; every Employee ID appears once	High	Sprint-1
	Target Table Setup	USN-3	As an administrator, I can create the target table with a field for each column	Table and all five fields are visible in the table list	High	Sprint-1
		USN-4	As an administrator, I can limit who can read or import data using roles and ACLs	Users without the role cannot open the table	Medium	Sprint-1
	Import Set Loading	USN-5	As an administrator, I can upload the file using Load Data	An Import Set table is generated and rows are loaded	High	Sprint-1
		USN-6	As an administrator, I can compare the staged rows with the source file	Staged row count equals source row count	Medium	Sprint-1
	Transform Map	USN-7	As an administrator, I can create a Transform Map from the Import Set table to the target table	Map is saved with the right source and target tables	High	Sprint-2
		USN-8	As an administrator, I can map every source column to its target field	All five columns are mapped	High	Sprint-2
		USN-9	As an administrator, I can mark Employee ID as the coalesce field	A second run updates records instead of duplicating them	High	Sprint-2
	Run Transform and Validation	USN-10	As an administrator, I can run the transform	Run completes and a transform history entry appears	High	Sprint-2
Data Owner / Reviewer		USN-11	As a data owner, I can check the loaded employees and the rows that were skipped	Records match the sheet; skipped rows show a reason	High	Sprint-2

User Type	Functional Requirement (Epic)	User Story Number	User Story / Task	Acceptance Criteria	Priority	Release
Project Team	Documentation	USN-12	As a team member, I can record screenshots and the steps followed	Screenshots and notes are complete	Medium	Sprint-2
