

Project Design Phase-II

Solution Requirements (Functional & Non-functional)

Date	04 October 2026
Team ID	SWTID-2026-5741
Team Members	N. Logeswari, S. Christiena
Project Name	Import Data using Transform Maps (Spreadsheet)
Maximum Marks	4 Marks

Functional Requirements:

The functional requirements of the proposed solution are listed below.

FR No.	Functional Requirement (Epic)	Sub Requirement (Story / Sub-Task)
FR-1	Data Preparation	Build the employee spreadsheet with Employee ID, Name, Email, Department and Location columns Remove empty rows, repeated entries and invalid values Save the file in .xlsx or .csv format
FR-2	Target Table Setup	Create a custom table to hold employee records, with a field for each column Choose suitable field types and make Employee ID mandatory and unique
FR-3	Import Set Loading	Upload the file through System Import Sets > Load Data Generate the staging (Import Set) table from the file headers Inspect the staged rows
FR-4	Transform Map Configuration	Create a Transform Map linking the Import Set table to the target table Map every source column to its target field Select Employee ID as the coalesce field
FR-5	Transform Execution	Run the transform from the Transform Map or the Import Set Open the Transform History to see the outcome
FR-6	Validation and Error Handling	Confirm the inserted and updated records in the target table Look into skipped or failed rows and fix the source data before re-running

Non-functional Requirements:

The non-functional requirements of the proposed solution are listed below.

NFR No.	Non-Functional Requirement	Description
NFR-1	Usability	Everything is done with standard ServiceNow modules, and all field mappings can be seen on a single Transform Map form.
NFR-2	Security	Loading and transforming data is restricted to administrator and import roles; table access is protected by ACLs, and data stays inside the instance.
NFR-3	Reliability	Coalescing on Employee ID means a repeated import updates existing records rather than adding copies, and every run is recorded in the transform history.
NFR-4	Performance	A file of a few hundred to a thousand rows loads and transforms within minutes without timing out.
NFR-5	Availability	The solution runs on the ServiceNow cloud instance and is available whenever the instance is awake; a developer instance may need to be woken after inactivity.
NFR-6	Scalability	The same Import Set and Transform Map can be reused for bigger files or extra fields, and scheduled Data Sources can later automate the import.
