

Project Design Phase-II

Technology Stack (Architecture & Stack)

Date	04 October 2026
Team ID	SWTID-2026-5741
Team Members	N. Logeswari, S. Christiena
Project Name	Import Data using Transform Maps (Spreadsheet)
Maximum Marks	4 Marks

Technical Architecture:

Technical architecture

Spreadsheet > Import Set > Transform Map > Target Table (ServiceNow developer instance) | Team ID: SWTID-2026-5741 | N. Logeswari, S. Christiena

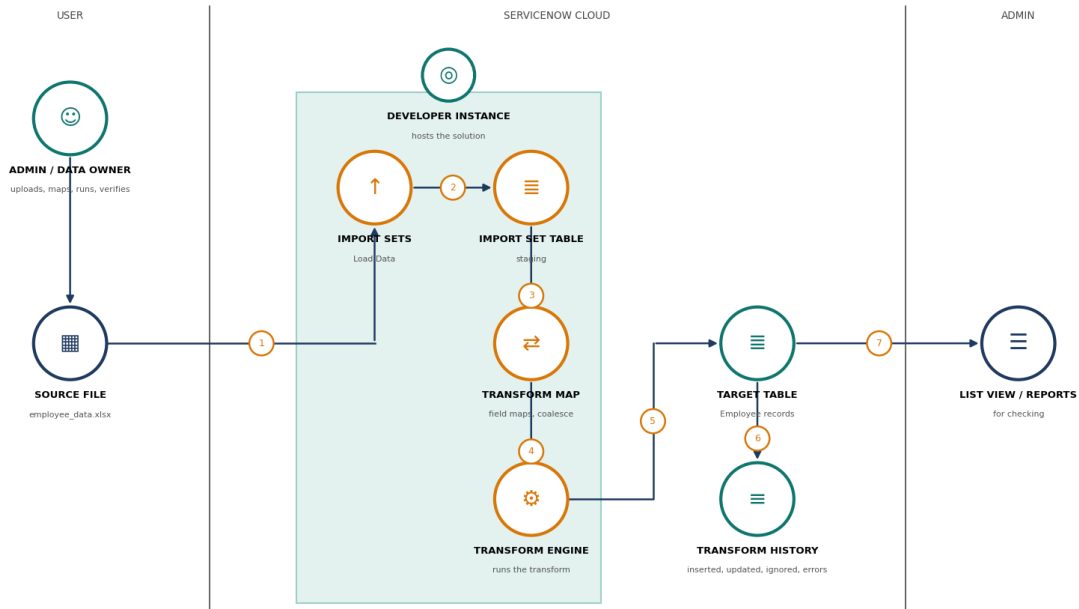

Table-1 : Components & Technologies:

S.No	Component	Description	Technology
1	User Interface	Where the administrator works with the solution	ServiceNow platform UI (list and form views)
2	Application Logic-1	Moving the spreadsheet into a staging table	System Import Sets > Load Data
3	Application Logic-2	Linking source fields to target fields and avoiding duplicates	Transform Map, field maps, coalesce
4	Application Logic-3	Optional clean-up and checks while transforming	Transform Map scripts (JavaScript)
5	Database	Staging table and target table	ServiceNow platform database
6	Cloud Database	Hosted database service	ServiceNow cloud instance (developer instance)
7	File Storage	Source spreadsheet	Excel (.xlsx) / CSV, held as an attachment during import
8	Infrastructure (Server / Cloud)	Where the solution runs	ServiceNow cloud (developer instance)

Table-2: Application Characteristics:

S.No	Characteristics	Description	Technology
1	Open-Source Frameworks	None needed; the data is prepared in a spreadsheet	Microsoft Excel / CSV
2	Security Implementations	Role-based access to import sets and the target table, ACLs and HTTPS access	ServiceNow roles, ACLs, HTTPS
3	Scalable Architecture	One Transform Map serves larger files; the platform is multi-tier and cloud hosted	ServiceNow platform
4	Availability	Reachable from a browser whenever the instance is awake	ServiceNow cloud
5	Performance	Bulk loading through staging; judged by import and transform time	Import Set and transform engine
